

* To convert from IP to AS requires an ASFinder object, for example: `make_AS_Table({'as_finder' => $asfinder_obj})`

** To convert from AS to country code or lat/lon requires a NetGeoClient object, for example: `make_Country_Table({'netgeo' => $netgeoclient_obj})`

*** To convert from IP to country code or lat/lon requires both ASFinder and NetGeoClient objects, for example:

`make_Country_Matrix({'netgeo' => $netgeoclient_obj, 'as_finder' => $asfinder_obj})`

**** To convert to application requires an AppPorts object, for example: `make_App_Table({'app_ports' => $app_ports_obj})`

***** To convert from country code to lat/lon requires a Countries object, for example: `make_LatLon_Table({'countries' => $countries_obj})`
